The Linolex 4000 Word Processor

We make fast wo

The Linolex Word Processor does more to reduce costs and increase throughput of manuals, contracts, correspondence — your entire workload — than any system ever devised.

Linolex minimizes the time spent on activities like proofreading, typing revisions and searching for part or all of a document. In virtually every office application, Linolex doubles or triples the amount of work produced.

Finally, here is a high-powered, high-speed text editor, storage system, printer and communications system that can **lower costs** while **increasing productivity**.

We're faster by design.

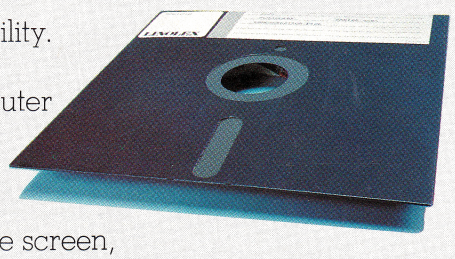
The Linolex **video screen** allows the operator to correct typing errors and make accurate revisions on the screen, before going to paper or diskette, assuring error-free printing. The screen also displays instructions for ease in operator training.

The **electronic keyboard** allows the operator to type as fast as possible. Formatting, carriage returns, logging and indexing are all performed automatically. The operator need only enter information in the proper sequence.

The **printer** quietly produces hard copy at the incredible rate of 350 words-per-minute.

The **floppy disk** stores more than any other word processing media, significantly reducing storage costs. Disk file maintenance and search features provide fast text recall (less than a second) plus quick revision capability.

In addition, the disk, printer and Linolex computer capability allow you to perform dual operations simultaneously. As text is keyed in and edited on the screen, previously edited documents can be printed.



Fast applications.

The versatile Linolex hardware provides the power and flexibility for the following specially designed applications programs.

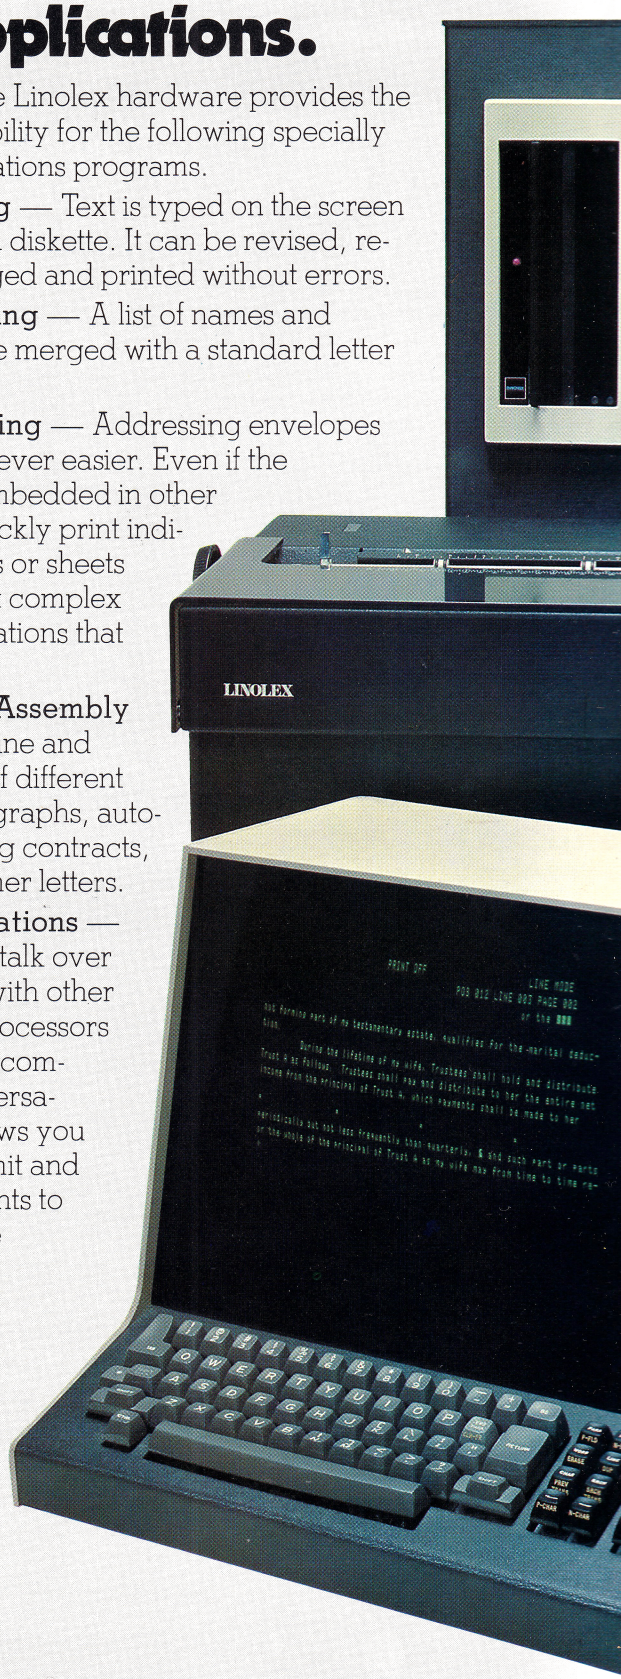
Text Editing — Text is typed on the screen and recorded on diskette. It can be revised, replaced, rearranged and printed without errors.

Letter Writing — A list of names and addresses can be merged with a standard letter prior to printing.

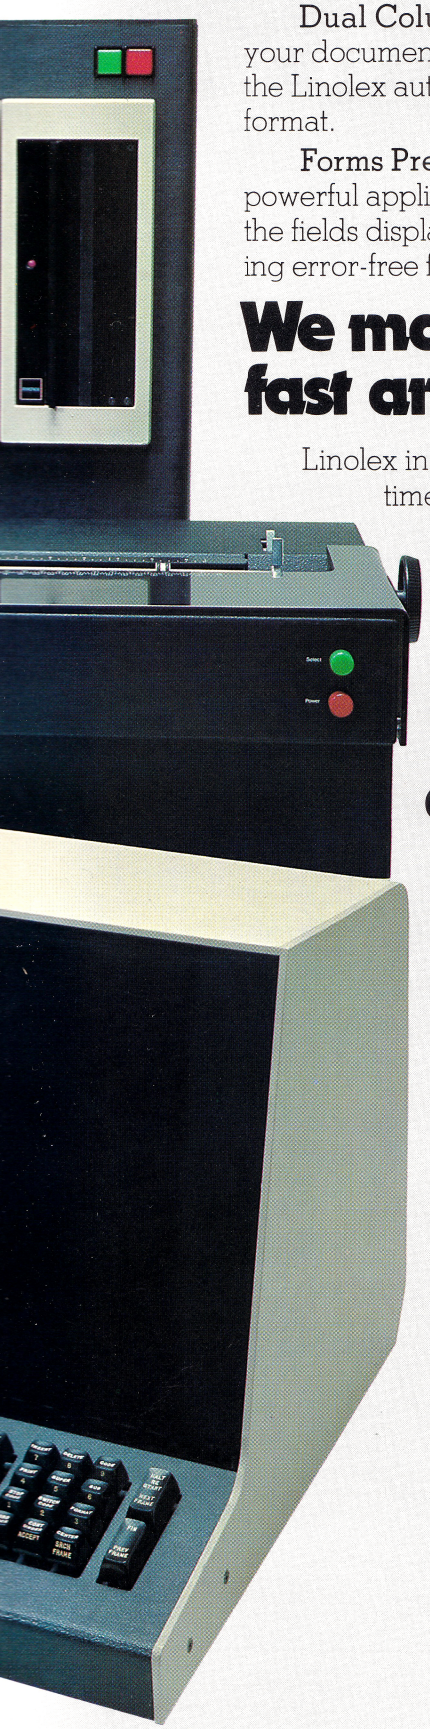
Label Printing — Addressing envelopes and labels was never easier. Even if the addresses are embedded in other text, you can quickly print individual envelopes or sheets of labels, without complex or wasteful operations that slow you down.

Document Assembly Select, combine and print hundreds of different boilerplate paragraphs, automatically creating contracts, wills and consumer letters.

Communications — The Linolex can talk over telephone lines with other Linolex Word Processors or with a central computer. This conversational ability allows you to quickly transmit and receive documents to and from remote locations.



rk of your words.



Dual Column Printing — Draft and revise your documents as single-column text and let the Linolex automatically print in two-column format.

Forms Preparation — A truly unique and powerful application that permits you to fill in the fields displayed on the screen while generating error-free forms on the printer.

We make conversion fast and simple.

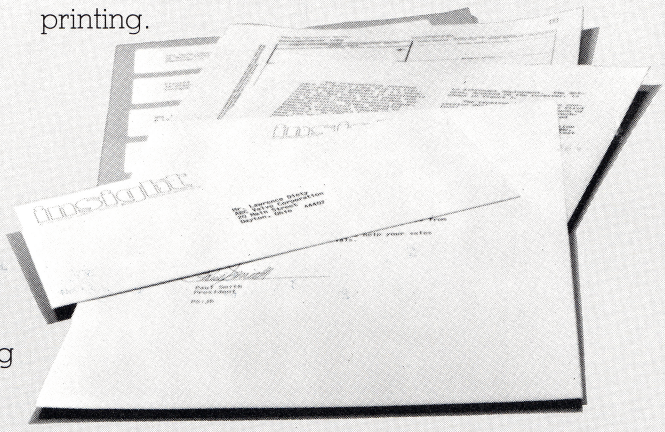
Linolex installations achieve immediate time and cost savings. The video screen carries complete instructions to guide the operator through any application, eliminating long training sessions and weeks of low productivity.

We grow along with you.

There is no system more responsive to change or growth of word processing requirements. From the beginning, Linolex has the power to conform to your operation at any workload level. Upgrading of equipment is unnecessary since the hardware is controlled by continually enhanced and improved applications software.

Additional applications.

Linolex offers capabilities in other applications areas including data entry, terminal simulation, and report processing and printing.



Save a fast buck.

Find out how the Linolex dramatically reduces costs while it increases productivity. Fill out and return this pre-paid reply card for a demonstration.
